

A SERIES

AS-A- PART OF OUR PROPRIETARY THREADED CONNECTIONS RANGE

A SERIES

The **A-Series** is our proprietary flush joint connection to be used on large diameter casing.

A course, strong and robust flush joint connection ideally suited to large diameter casing however can be used on smaller diameters also (2" - 26"). The series is available in 3 wall thickness versions - Light (AL), Medium (AM), Heavy (AH) and Heavy Xtra Large (AHXL) to allow for customisation to suit your specific requirements.

APPLICATIONS

- **Surface or Production Liner**
- **Goaf Casing**
- **Surface or Intermediate Casing for Water and Service Wells**

KEY BENEFITS

- **Improved Safety** - removes the requirement for hot works above holes. Amongst other design features, under load, the A Series thread pulls together rather than apart.
- **Decreased Costs** - Rig time reduced due to fast running connection. The ability to have a heavy walled coupling on thinner walled pipe also reduces the cost of the materials whilst still maintaining high ultimate joint strength.
- **Fast installation** - The A Series thread is fast to run and is designed with anti-galling in mind for quick makeup and installation times.
- **Full Traceability** - every product is fully traceable with material heat certificates and gauging data supplied. All welds are completed to Australian Standards and welded in accordance with third party verified welding procedures.
- **Bring your projects online faster** with a product you can absolutely trust
- **Best in Class**
- **Safe, robust, reliable and cost-effective**
